

simplicio-prompt - WITH vs WITHOUT (real PHPUnit, sistema-sindico)

Date: 2026-05-28 simplicio-prompt under test: v1.7.0 Target: wesleysimplicio/sistema-sindico (real PHP 8, public on GitHub)
NOT regex. NOT a toy harness. The generated file replaces the real source file in a working copy of the real repo; a hidden PHPUnit test (true AND false states) is added; the full production suite runs. Pass = phpunit exit code 0 - the same green/red the project's CI uses.

Headline

Side	Passed	Rate	vs baseline
WITHOUT simplicio-prompt	4/16	25%	-
WITH simplicio-prompt	4/16	25%	+0 pts
(reference) simplicio-cli	11/16	68%	+43 pts

Excluded 1 model(s) for API/provider failure (no model output returned).

Per-model

Model	WITHOUT	WITH sp	Delta	cli ref
google/gemma-3-4b-it	2/8 (25%)	2/8 (25%)	+0	6/8 (75%)
meta-llama/llama-3.1-8b-instruct	2/8 (25%)	2/8 (25%)	+0	5/8 (62%)
google/gemini-3.5-flash	n/a (API)	n/a (API)	n/a	n/a

Per-task x model (WITHOUT / WITH simplicio-prompt)

Task	gemma-3-4b-it	llama-3.1-8b-instruct
password_strength	. / .	. / .
password_require_symbol	. / .	. / .
env_get_int	. / .	. / .
env_get_bool	. / .	. / .
admin_only_allowed_roles	P / P	P / P
rate_limit_bucket_key	. / .	. / .
base_repository_build_where_sql	e / sql	. / .
router_has	P / P	P / P

Interpretation

simplicio-prompt v1.7.0 is net-neutral vs the raw baseline on the models with clean data this round - no regression, no improvement. The earlier catastrophic regressions on this exact benchmark are resolved by the v1.7 mode-selection rewrite (template split, persona reframe, output-shape examples). simplicio-prompt does not exceed simplicio-cli on one-shot code generation, and is not expected to: the two products solve different problems. Use cli for single-file code edits, sp for orchestrated multi-step work.
